

in this , we are going learn , how to create Azure DevOps account.

- search "azure DevOps in google"
- start for free
- we can use personal **outlook** and office (company email), "**personal Gmail is not supporting**" to create AZURE DevOps account.
- in this demonstratin creating with **outlook.com**
- to this URL <https://azure.microsoft.com/en-in/products/devops>

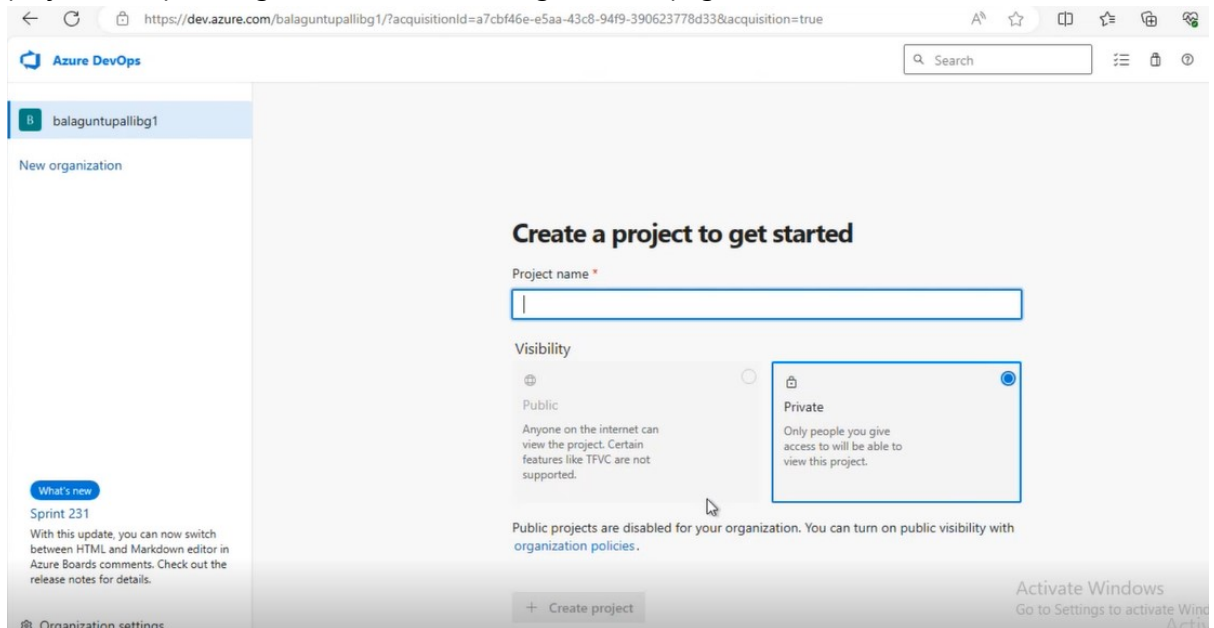

- in the above image, if we click on github, it re-direct **github** account
- if we click "signin" , it require personal **outlook** email__ to create **azure DevOps account**

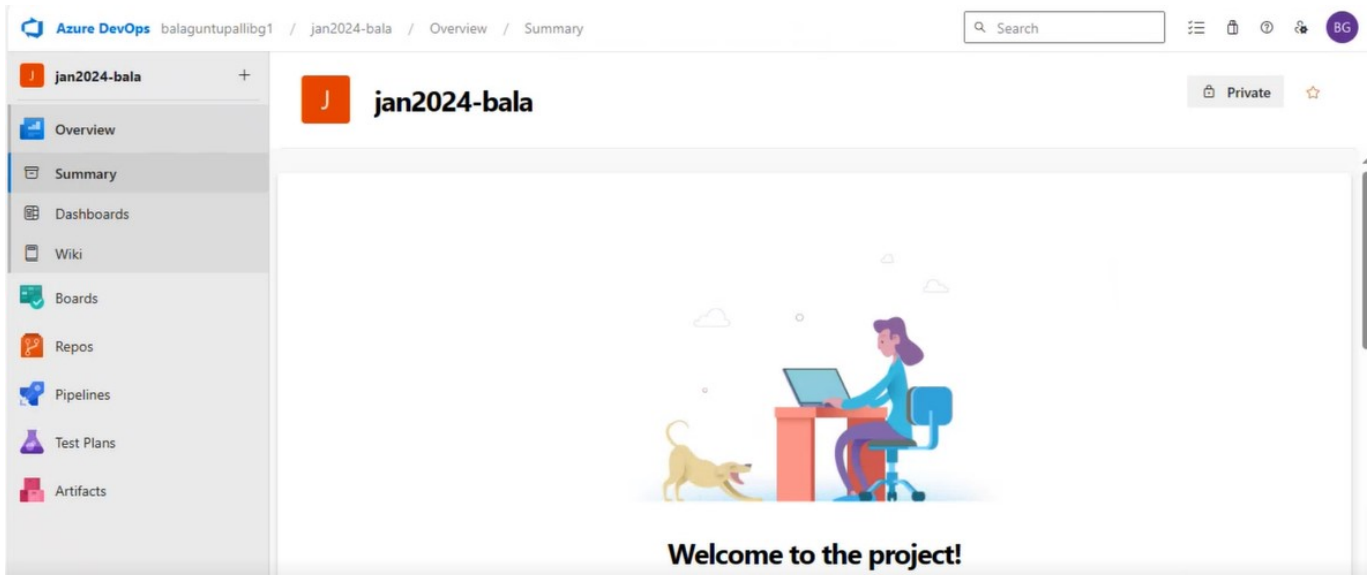

- in this above image, it ask the below things
 - organisation name

- project host place, , give the details , it will go to next page

- in this image, it is asking **project name** and **Project type**
 - project type:
 - public : any can see(un-authenticated user) from internet , project details, of azure repos pipelines and other details also.
 - private: it require authentication to view, edit of azure DevOps services
 - 99.999 % we will create private projects only.
 - note : we can change **projectname** and **project type** at any time.

- the above page is azure DevOps UI.
- in the left hand menu, we will see, azure repos, azure pipeline, azure artifcat, azure test plans, we will going to learn in further class.
